

TERMINATOR E-MOBILE

Shredder for
all types of waste

OVERVIEW

Low-speed single-shaft shredder for all types of waste

The Terminator is one of the most successful single-shaft shredders for all types of waste. The new e-mobile series adds semi-mobile electric-powered versions to the line-up, featuring maintenance-free electric motors instead of diesel engines. The concept combines the compact design and flexibility of a mobile machine with the energy efficiency of a stationary machine.

The hydraulic drum drive with load-dependent speed control develops the highest shredding forces. Stepless cutting gap adjustment allows sizing of the output for its intended purpose. A modern control panel and easy access to all maintenance points ensure a high level of comfort in everyday work.

- ▶ Shreds even the toughest materials
- ▶ Xtron version for even more versatility
- ▶ Choice of shredding units for a perfect fit with the application
- ▶ High efficiency and minimal maintenance due to electric motor

Wide range of applications

01 Bulky waste, commercial waste

The highest possible shredding force is required for these inhomogeneous waste streams. The Terminator's powerful drive delivers it. The F or XXF unit is used depending on the desired degree of shredding, or the V unit (xtron) for particularly bulky materials.

02 Household waste

These waste streams call for consistent shredding and long tooth life. That's what the F-unit offers; its armoured teeth and easily replaceable wear protectors keep operating costs low.

03 Waste wood

The bigger the shredder's feed hopper, the better, especially for waste wood. The Terminator's hopper is larger than just about any comparable machine. The aggressive feed of the V shredding unit and programmable reverse cycles keep throughput high.

04 Special applications

The Terminator shreds pretty much anything, from production waste to white goods to mixed C&D waste. Even tyres, whether auto or special purpose, are chewed up by the high tooth force developed by the V and XXF units.

Applications	F	V	XXF
Waste wood	+	++	+
Green waste	0	+	-
Bulky waste, commercial waste	+	++	++
Household waste	++	0	0
Special applications (Tyres etc.)	+	++	++

The machine in greater detail

Every Komptech machine meets the highest requirements for dependability and value retention. This is assured by the use of high-quality components, certified production and gapless quality control.

01

Electric motor

- Three-phase asynchronous motor with high efficiency (up to 95 %)
- No local exhaust emissions at the operating site, 100% CO₂ reduction
- Fully encapsulated engine compartment to reduce noise emissions

02

Drum drive

- Hydraulic drum drive with load-dependent speed control
- Overload protection to protect drum and engine
- S version options: Double drum drive for higher shredding force

03

Shredding unit

- Two different shredding units for different materials
- Hydraulically adjustable counter comb for setting the particle size
- Efficient shredding by teeth with cutting edges

04

Operation

- Operating panel with a 7" high resolution screen and intuitive menu guidance
- Reversing program to adapt to the material and for drum self-cleaning
- Onboard diagnostics, with trouble-shooting integrated into the control system for fast problem solving

05

Flexibility

- Connection and disconnection by single plug system, easily be done by just one person
- Minimum time needed for startup, enabling flexible use at multiple sites
- Compact mobile machine design with road approval

06

Maintenance

- Generously sized doors for optimal access to all maintenance points
- Maintenance-free electric motor
- Optimum protection of all components through solid engine compartment cladding and special control cabinet

SHREDDING UNIT

◀ F Unit

The F drum has two spiral rows of left and right-cutting rectangular teeth, 16 per row. The degree of shredding can be set by adjusting the radial shredding gap, while the fixed axial cutting gap ensures defined shredding.

- Highly contrary-resistant
- Double-use drum teeth
- Radial cutting gap adjustable from 0-45 mm
- For bulky, commercial, household, and wood and mixed C&D waste, and much more

▲ V Unit (xtron)

The V drum has aggressively designed drum teeth with maximum distance to the next tooth. The staggered arrangement of the counter comb teeth significantly enhances the shredding effect.

- 16 drum teeth / 17 counter comb teeth
- Height drum tooth: 180 mm
- Radial cutting gap adjustable from 0-30 mm
- Optional comb elements, can be mounted without tools

◀ XXF Unit

The XXF drum has 22 tooth mountings with the F drum teeth. The tooth brackets are arranged in a chevron (herringbone) pattern, and move the material flow towards the middle of the drum.

- Full shredding force concentrated on one tooth
- Consistent particle size with high degree of shredding
- Double-use drum teeth
- Radial cutting gap adjustable from 0-45 mm
- For commercial waste, bulk waste, waste wood

Shred everything

Even the toughest kinds of waste don't stand a chance against the Terminator. It all gets reduced to the desired particle size. The particle size range is determined by the choice of shredding unit, and fine adjustment is made by setting the cutting gap. Folding the counter comb completely away makes the shredding area freely accessible for all types of maintenance. The massive

teeth on the drum and counter comb are securely bolted on and can be re-used multiple times. Armouring increases their life, and easily replaceable wear rings protect the body of the drum – all factors that keep wear and maintenance costs low.

Possible particle sizes:

AT WORK

In daily use

Over seven cubic metres hopper volume

Just load material into the big hopper – the machine does the rest. Hydraulically folding hopper sidewalls make the already generous shredding chamber even bigger.

Efficient shredding

The use of an electric motor instead of a diesel engine offers significant advantages in energy efficiency. Electric motors can have efficiencies up to 95 percent, while diesel engines max out at 30 to 35 percent. With comparable throughput, up to 70 percent of the energy costs can be saved this way. At the same time, maintenance costs are reduced by up to 30 percent.

Terminator x(crossfunctional)tron(strong)

The xtron version is equipped with the V shredding unit, which is suitable for all types of waste, but especially for waste wood and green waste. With a performance of 280 kW, an optimised hydraulic system and optional comb elements, the Terminator xtron offers outstanding versatility in waste processing.

Clean running

No exhaust gases, minimal noise emissions due to full encapsulation of the drive, and suitability for indoor or outdoor use, all make the electric shredder the ecologically sustainable solution. The higher the proportion of renewables in the energy supply, the more CO₂ can be saved by comparison with a conventional diesel engine. In best cases the CO₂ savings can be 100 percent.

Ready for anything

Options let users configure the Terminator for the exact task. Wireless remote control and central lubrication add to ease of use, a moistening system keeps dust down, and an extended discharge conveyor allows high discharge cones. The over-conveyor magnet can be exactly aligned with the discharge conveyor position, for optimum separation performance. New: Throughput measurement with evaluation via Connect!.

SERVICE

The Komptech plus

Top advice

We'll show you how to optimize your processes, based on our experience and extensive data analyses.

Service near you

Expert technicians are on-site quickly to make sure your machines keep running.

Spare parts always available

Intelligent stocking for the fast, economical provision of high-quality spare parts.

All-in solutions

From individual mobile machines to complex stationary systems, with us you get the right process solution.

Productivity in view

Apps and integrated monitoring let you keep an eye on operating data and economy.

Need-based service

Our maintenance and service agreements, as well as extended warranties, are aligned with your needs.
